

PLANET CYCLE SHELTER

The PLANET cycle cover is constructed from a pair of 10mm thick cut sheet steel supports with 10mm thick base plate, prepared for ground fixing with bolts. This is linked to a 80x40x2mm tubular steel bar, all galvanised and polyester powder coated. The cover, made from 8mm thick honeycomb polycarbonate, is supported by a fixing system with 6mm thick sheet support ribs. To use the structure as a bike shelter, the CICLOS bike rack with steel supports is recommended. Length: 3370mm, depth: 3350mm, height: 2280mm.
